 $\zeta$  has been used instead of  $\xi$  in the equations mentioned below.

The following are the corrected equations:

$$\operatorname{GEV}(H; \mu, \sigma, \xi) = \begin{cases} \exp\left(-\left(1 - \xi\left(\frac{H - \mu}{\sigma}\right)\right)^{\frac{1}{\xi}}\right), & \text{for } \xi \neq 0 \\ \exp\left(-\exp\left(\frac{-(H - \mu)}{\sigma}\right)\right), & \text{for } \xi = 0 \end{cases} \qquad E\left[H - \mu_0/H > \mu_0 > 0\right] = \frac{\sigma + \xi y}{1 - \xi} \text{ for } \xi < 1.$$

$$\operatorname{CEV}(H; \mu, \sigma, \xi) = \begin{cases} \exp\left(-\left(\frac{H - \mu}{\sigma}\right)\right), & \text{for } \xi \neq 0 \end{cases} \qquad \operatorname{CP}(H - \mu_0/H) > \mu_0 > 0 = \frac{\sigma + \xi y}{1 - \xi} \text{ for } \xi < 1.$$

$$\operatorname{CP}(H - \mu_0/H) > \mu_0 > 0 = \frac{\sigma + \xi y}{1 - \xi} \text{ for } \xi < 1.$$

$$\operatorname{CP}(H - \mu_0/H) > \mu_0 > 0 = \frac{\sigma + \xi y}{1 - \xi} \text{ for } \xi < 1.$$

$$\operatorname{CP}(H - \mu_0/H) > \mu_0 > 0 = \frac{\sigma + \xi y}{1 - \xi} \text{ for } \xi < 1.$$

$$\operatorname{CP}(H - \mu_0/H) > \mu_0 > 0 = \frac{\sigma + \xi y}{1 - \xi} \text{ for } \xi < 1.$$

$$\operatorname{CP}(H - \mu_0/H) > \mu_0 > 0 = \frac{\sigma + \xi y}{1 - \xi} \text{ for } \xi < 1.$$

$$\operatorname{CP}(H - \mu_0/H) > \mu_0 > 0 = \frac{\sigma + \xi y}{1 - \xi} \text{ for } \xi < 1.$$

$$H_{\rm T} = \begin{cases} \mu - \frac{\sigma}{\xi} \left( 1 - \left( -\log\left(1 - \frac{1}{T}\right) \right)^{\xi} \right), & \text{for } \xi \neq 0 \\ \mu - \sigma \ln\left( -\log\left(1 - \frac{1}{T}\right) \right), & \text{for } \xi = 0 \end{cases}$$
 (2)

$$GPD(H; \mu, \sigma, \xi) = \begin{cases} 1 - \left(1 - \xi \left(\frac{H - \mu}{\sigma}\right)\right)^{\frac{1}{\xi}}, & \text{for } \xi \neq 0 \\ 1 - \exp\left(-\left(\frac{H - \mu}{\sigma}\right)\right), & \text{for } \xi = 0 \end{cases}$$
(3)

$$H_{\rm T} = \begin{cases} \mu + \frac{\sigma}{\xi} \left( 1 - (\lambda T)^{-\xi} \right), & \text{for } \xi \neq 0 \\ \mu + \sigma \ln(\lambda T) \xi, & \text{for } \xi = 0 \end{cases}$$
 (4)

$$E[H - \mu_0/H > \mu_0 > 0] = \frac{\sigma + \xi y}{1 - \xi} \text{ for } \xi < 1.$$
