

## ***Interactive comment on “Risk assessment study of fire following earthquake: a case study of petrochemical enterprises in China” by J. Li et al.***

**Anonymous Referee #5**

Received and published: 9 September 2013

The methodology used in the paper to calculate the post-earthquake fire total loss EFL is adequate. However, readers of this paper can not recheck the calculated EFL. If some existing data of ELF are available, the authors may verify the calculated EFL by using these data. Expression (6) on page 1784 should be expression (5).
