

## ***Interactive comment on “Rogue waves in a wave tank: experiments and modeling” by A. Lechuga***

**Anonymous Referee #2**

Received and published: 11 September 2013

Although I am not fully satisfied with the author’s response to my comments, I recommend accepting the manuscript for publication. My lack of satisfaction stems from the fact that the authors ignored some of my remarks. Also, while the dimensions specified in his last reply are consistent with the boxed equation, the initial equation (1) remains dimensionally inconsistent. Probably it would be preferable to present only the time-independent boxed version of the equation in the published version .
