

Interactive comment on “Tsunami hazard assessment in El Salvador, Central America, from seismic sources through flooding numerical models” by J. A. Álvarez-Gómez et al.

Anonymous Referee #4

Received and published: 25 September 2013

After considering the manuscript and reading the three reviews, the final recommendation "minor revision" stands as the paper primarily requires some additional details on the model descriptions and validation with DART buoys. Lastly the text should be polished.
