Interactive comment on “Lightning flash multiplicity in Eastern Mediterranean thunderstorms” by Y. Yair et al.

Anonymous Referee #2

Received and published: 6 October 2013

2nd Report of Referee for Revised Version: Page 3531; Line 24-27. See above comment “Line 87-90”: The problem has not been resolved. The authors still state that the enhanced detection of “strokes” may be an artefact (note: not “artifact”). This unlogical reasoning must be remedied.

Page 3541; Lines 1-12. See above comment “Line 342, 345-346”: The arguments are still unsound and quite unclear.

Additional comment: The notation “NALDN” is undefined, while “NLDN” is clear.

All other shortcomings previously outlined have been remedied.
