

Interactive comment on “Characterization and effects of cold fronts in the Colombian Caribbean Coast and their relationship to extreme wave events” by J. C. Ortiz-Royero et al.

Anonymous Referee #2

Received and published: 7 October 2013

The authors analyze the characterization of cold fronts along the Colombian Caribbean coast. This characterization was accomplished by the compilation of cold front events recorded during the last 16 years, the establishment of their seasonality, and the use of trend analysis.

Then, after having read the corrections made over the original paper believe that the paper is ready to be published in NHESS.
