

## ***Interactive comment on “Characteristics of high waves observed at multiple stations along the east coast of Korea” by S.-H. Oh and W.-M. Jeong***

### **Anonymous Referee #3**

Received and published: 23 October 2013

It is a nice study addressing extremely high waves occasionally arriving at the Korean coast of the East Sea. There are still limited investigations published regarding wave measurements of extremely high waves therefore the present study is a valuable contribution to this topic. Understnading of meteorological and oceanographic conditions generating such extreme waves is of importance both for academia and applications. Accounting for the Referee#1 comments has improved the quality of the paper.

The paper is recommended for the publication in the NHESS Journal.
