We appreciate your comment. However, ours is a manuscript of the type “Comments & Replies” focused on the discussion of the findings by Di Lorenzo et al. (2011) and, as a matter of fact, the manuscript is quite long for a commentary paper. So, other discussions further extend the text. In addition, this is not the context to discuss the other types of electromagnetic signals (precursors?) which were observed during the period

C19

before L’Aquila earthquake. The reliability of these signals as seismogenic signatures, in our opinion, requires further discussion in a separate review article.
