Interactive comment on “Electrical resistivity tomography for studying liquefaction induced by the May 2012 Emilia-Romagna earthquake ($M_w = 6.1$, North Italy)” by A. Giocoli et al.

A. Giocoli et al.

alessandro.giocoli@enea.it

Received and published: 4 December 2013

1) Referee: Page 5, line 21 resistivity. The Wenner-Schumberger array gave the best result. In all cases the Root

1) Authors: ok

2) Referee: Page 6, lines 2-5 characteristics. In general, the higher resistivity values (> 15 ohm.m) are related to the Fluvial Channel Unit (FCU), the medium resistivity values ($13 < \text{ohm.m} < 40$) to the Pleistocene Alluvial Plain Unit (PAPU) and the lower resistivity values (< 20 ohm.m) to the Marshes Unit (MU).
