

***Interactive comment on “On the behavior of site effects in Central Mexico (the Mexican Volcanic Belt – MVB), based on records of shallow earthquakes that occurred in the zone between 1998 and 2011” by A. Clemente-Chavez et al.***

**Anonymous Referee #3**

Received and published: 9 February 2014

The manuscript is a relevant contribution to the understanding of seismic hazard in Mexico. All my recommendations were considered by the authors in this revised version of the paper. The article has improved greatly in its structure. However, some minor English corrections are still needed before publication including the figure's captions. I recommend it being edited by the senior authors of the paper. Also, I consider that the article should be accepted subject to these minor corrections.
