

Interactive comment on “Non-linear water waves generated by impulsive motion of submerged obstacle” by N. I. Makarenko and V. K. Kostikov

Anonymous Referee #1

Received and published: 16 February 2014

This is an interesting manuscript describing the fully nonlinear problem of unsteady water waves generated by an impulsive moving obstacle. The authors properly responded to the initial comments during the preliminary phase of the review process. I suggest that the manuscript is accepted for publication after the authors address a few minor issues:

- 1) at page 7655 of the nhesd manuscript there us reference to a BEq system? What do the author try to refer to? Is it B in the equation system?
- 2) Although the manuscript is written very well, I have seen that sometimes the article "the" is missing. I suggest that the authors check carefully the text to amend this minor issue.
