

Interactive comment on “Modelling the NO emissions from wildfires at the source level” by Y. Pérez-Ramirez et al.

Anonymous Referee #2

Received and published: 21 February 2014

The authors propose an interesting approach in order to model the NO emissions from wildfires at the source level. Analyzing the manuscript, the methodology is clearly explained, the general edition and the figures are well represented. The only suggestion is to improve the conclusions stressing the importance of scientific achievements
