

## ***Interactive comment on “Chlorophyll increases off the coasts of Japan after the 2011 Tsunami using NASA/MODIS data” by E. Sava et al.***

**Anonymous Referee #5**

Received and published: 21 March 2014

In general, the paper is well written and the analysis presented is quite clear. However, there is a minor issue I have commented on to improve the paper.

Specific comment: The Authors reported back on chlorophyll concentration using time series MODIS data through conventional statistical analysis. For a better clarification of this study, they should at least insert a flowchart showing the steps of data processing required for the interpretation of the results.
