Received and published: 7 April 2014

We thank Dr. Barthlott for his relevant and constructive comments.

Specific comments:

We have taken into account all Referee’s suggestions. We mention below only the non-obvious changes.

Comment 2: a sentence has been added to mention the area-averaged precipitation – see lines 12-13 at page 14.

Comment 3: the sentence at the end of page 3 and beginning of page 4 has been changed accordingly.

C2970

Comment 5: see changes at page 7, lines 4-5.

Technical corrections:

We have taken into account almost all the referee’s suggestions (thanks also for having spotted typos and style problems!).

Comments no. 30 and 31: we agree that the first version was not clear and we have changed the text from line 23 to 30 at page 17.

Comment no. 33 (figure quality): we have verified that the figure resolution in the .doc manuscript we have provided is much better than in the .pdf document available to the referees. So we assume that this problem will be resolved in the final version published in NHESSD.

Comment 34: we have put the indication about the geographical coordinates in the captions of figs. 1-4.

Comment 35: the final size of the figures can be decided by the NHESSD Editorial office. The quality of provided figures seems to us to be good enough for possible enlargement (see above). We have corrected the problem of Fig. 5b.
