First of all I would like to thank the referees for their effort, and for raising interesting issues that surely will help the authors in improving the manuscript. This paper has been subject of 3 reviews with different feedbacks, thus providing really a useful discussion. The reviewer #1 (Lorenzo Marchi) rejected the paper raising several critical issues, while the reviewer #2 and #3 (Ronald Pöppel) think that it merits publication only after major changes. I really appreciated the detailed replies that the authors provided for each reviewer. Because of these replies, I think that the authors should have a chance to propose a revised version of their work. I will be able to make a final decision only

C3195

after receiving the paper revised according to the major changes proposed. However, I should expect an improved version of the manuscript, no reason to expect otherwise given such kind of discussion.
