The paper seem quite acceptable in present form. some additionla observation area provided as follow:

1) Table 1 – pleae insert LAT/LONG coordinate of each station. 2) in the table 4 and table 6 the averages of DIP an rake direction and sigmas has been obtained with rigorous circular statistics mthodologies? please chek because some diffrence may exixts in the contrary. because angular or directional data a simple arithmetic avergae is not acceptable and in some case are affected the final values. 3) table 7 should be

C357

restuctured becausee in this form isn't enough clear for the readers
