“Non-inductive components of electromagnetic
signals associated with L’Aquila earthquake
sequences estimated by means of inter-station
impulse response functions” by Di Lorenzo et
al. (2011)” by F. Masci and G. De Luca***

F. Guzzetti (Editor)

fausto.guzzetti@irpi.cnr.it

Received and published: 17 February 2013

As chief editor of NHESS, I suggest that this paper should be handled as a Brief Communication. This is because of the rather long time between the original paper of Di Lorenzo et al. (April 2011) and the recent submission. The title and the structure of the brief communication should be changed accordingly, not focusing it only (or specifically) to the paper of Di Lorenzo et al. (2011).

C4

For detailed information on the manuscript types, please check: http://www.natural-hazards-and-earth-system-sciences.net/submission/manuscript_types.html.
