Received and published: 13 July 2013

Dear Dr. Wang,

I have now received two reviews of your manuscript. The reviewers' opinions are both negative. Referee#1 recommends rejecting the manuscript; referee#2 suggests major revisions. Based on these reviews, taking also into account that it will take a long time to meet the demands of the two referees, I would like to discourage submission of a revised manuscript. In this case you will have more time to turn this into a more suitable paper for a new submission. Alternatively, you have to submit a revised version of the

C511

manuscript addressing all the comments and suggestions of the two referees. The revisited version of the manuscript will be sent to the referees for further review.

Sincerely,

Fabrizio Masci
