General comments: This is a very valuable contribution to research on flood loss estimation. The question of the transferability of depth/damage function to other regions is a topic which had been recognised by the scientific community but not analysed yet in that detail. The article provides a comprehensive literature overview, methods and data used are clearly explained and results are presented in a good way. I have written some specific comments directly in the pdf attached, but these are mainly minor issues. From my point of view the paper is acceptable for publication in NHESD after minor revisions.
