

Interactive comment on “Perception of flood and landslide risk in Italy: a preliminary analysis” by P. Salvati et al.

P. Salvati et al.

paola.salvati@irpi.cnr.it

Received and published: 8 July 2014

Dear Prof. Malamud,

we have responded to the comments of the two independent referees. Their comments and suggestions were useful, and helped us to improve the quality and readability of our work. We are particularly grateful to Peter Bobrowsky for his copy editing of the text. We have accepted all the changes made by this referee.

We have also accepted most of the comments made by the first referee (anonymous). To response to a specific query, we have added an entire new section of the text (in the Discussion) that compares our results to results published previously in the literature.

C1349

We are now ready to submit the revised version of our work. Overall, we consider this new version of the manuscript significantly improved, and we hope that it will be accepted for publication in the journal Natural Hazards and Earth System Sciences.

We look forward to hearing a decision from you soon.

Paola Salvati
