I revised the manuscript "The use of FLO2D numerical code in lahar hazard evaluation at Popocatépetl volcano: A 2001-lahar scenario" by CABallero and Capra. I think the paper is of interest for NHESS, and I recommend only minor revisions before publication. Follow some comments and technical corrections.

Main point. At present, the results section contains also a broad discussion of the data. I suggest to separate the results from discussion or to entitled the paragraph Results and Discussions, deleting the discussions from the following paragraph.

C2192

Minor points. Line 7. What volcanic crisis? Line 23. Delete old and new Page 4583, line 17. Substitute good to high degree of accuracy Line 22. Hyperconcentrated Line 24. Delete unpublished Page 4585 Line 26. pumice are always juvenile. I do not know what are secondary andesitic fragments
