Interactive comment on “50 years return period wet-snow load estimation based on weather station data for overhead line design purpose” by H. Ducloux and B. E. Nygaard

S. Fikke

fikke@metconsult.no

Received and published: 8 October 2014

I have read this manuscript with great interest. I will suggest the following change for the second hyphen on top of p 5152. It would be better to say here: - It is assumed that a 25 year period is long enough to reflect the normal variability in local weather, and short enough not to be influenced significantly by any long term trends in climate.
