Received and published: 12 October 2014

I would like to thank the authors for their reply. My suggestion is to maintain the first title, so “A theoretical model for the initiation of debris flow in unconsolidated soil under hydrodynamic conditions”. Having said that, even if a series of major critical issues have been raised (the paper really needs to be revised in deep), I would like to give to the authors, because of their detailed replies, a chance to propose a revised version of the work. I will arrange then a second stage of the review through the reviewers. Only after that I will make my final decision.
