Received and published: 1 December 2014

Dear Colleague,

I've read the paper "Integrated Seismic Risk Analysis Using Simple Weighting Method: The Case of Residential Eskişehir, Turkey" by E. Pekkan, M. Tun, and Y. Guney.

1) The English is fairly good.

2) Contribution:

a) The previous test wells in the study area were 10 meters of depth maximum. In this paper, the authors claim that they've reached 20 meters of well depth.

Discussion Paper

b) The authors have obtained simultaneously the soil liquefaction, and the shear-wave velocity determination.

Regards, Berkan Ecevitoglu, PhD
