Received and published: 9 December 2014

The comments raised by Ref. #1 are editorial comments that have been largely accepted in the text, except to the suggestion of “prediction” instead of “forecast” at p.5722/21 and p.5727/5. As far as we know, English language uses this two terms to emphasize some underlying deterministic or probabilistic concepts of the guess. For these reasons we have preferred to maintain the original phrases, but we submit the final decision to the Editorial choice. Anyway, on page 5727 we define as a forecast as a “probabilistic prediction”: thereafter the term forecast is adopted throughout the text. All the changes to the text are given by a detailed list of changes, and an annotated pdf file. They are comprehensive of all the referees’ comments.
