

***Interactive comment on “Bayesian trend analysis  
of extreme wind using observed and hindcast  
series off Catalan coast, NW Mediterranean Sea”  
by M. I. Ortego et al.***

**Anonymous Referee #2**

Received and published: 3 April 2014

The paper touches an interesting topic that should definitely be receiving further attention particularly in the context of climatic change studies, so required nowadays that the new IPCC-AR5 has become public.

The paper in general terms is well structured and conceived. However it should address explicitly the applicability of this technique to projected time series and how it could be used in the climatic change context (future, not only past).

More specifically the paper should describe more carefully the points included in the attached PDF.
