Dear Editor,

We have carefully checked all the comments provided by the referees, and we have incorporated the due amendments in a preliminary version of the revised manuscript. In case of a positive response in your behalf, a native speaker will perform an additional revision of the grammar before the upload (as requested by Referee#1). In addition, we plan to improve the state of the art section with some recently published papers.

Our revision left just one open issue: at pg. 6606, lines 10 - 20, Referee#2 asks to

C3074

"move explanation of figure labels to figure captions". As we explained in the response, in this part of the manuscript we do not simply introduce some figure labels, but we introduce some variables that will be used in forthcoming parts of the manuscript. We believe that such references should be present in the text. Maybe they could be organized in a table and the figure caption could refer to that table. We ask your valuable suggestions about the most appropriate way to settle this issue.

Best regards,

On behalf of all co-authors

Samuele Segoni
