Received and published: 1 February 2015

Dear Dr. Stähli,

the two selected anonymous referees have posted their comments on your work. Both reviewers consider your work valuable and worth publishing in NHESS. I have read the paper myself, and share the general opinions of the referees. In my opinion the paper is well written, and tackles in an appropriate way a significant - and poorly discussed - problem for landslide EWS.

The two referees have provided a number of useful comments and recommendations. I encourage you to consider these comments and recommendations when preparing the revised version of your work.

C3262

I take the opportunity to inform you that a number of papers in our special issue are currently under review, or have been published. The papers are accessible at the following link: [http://www.nat-hazards-earth-syst-sci-discuss.net/special\\_issue32.html](http://www.nat-hazards-earth-syst-sci-discuss.net/special_issue32.html). Please consider posting comments on these papers, and on the other papers that will be added in the next few days. Please also consider the opportunity to comment & cite the papers published in the special issue in your own work. This will increase the general interest of the special issue.

Best regards,

Fausto Guzzetti
