landslide-induced debris flows: case studies of  
Typhoon Morakot in southern Taiwan” by J.-C.  
Chen and M.-R. Chuang***

**Anonymous Referee #4**

Received and published: 6 April 2014

1. Field observations were used in the study to calibrate the discharge coefficient. It would seem important for the authors to report when and how field observations were made.
2. Simulation results of SXK and XKD gullies do not fit field observations as well as HSX gully. Why?
