Received and published: 30 April 2015

Dear Drs. Robert Field et al.

Thank you very much for extensive manuscript submission to NHESS on developing a global fire weather database.

We have now received two reviews and one short comment on your manuscript.

The paper is overall very well done, although some items, as you will see, will require some changes.

Can you please reply in detail to all comments from the reviewers and short comment, and prepare a new manuscript. In your reply, please include a detailed summary of how

C3699

you have dealt with each comment, and if you do not agree with a specific comment, your reasons.

Please also include a track changes document of your revised document, so it is clear what has changed.

I look forward to receiving your reply (uploaded here in the discussion phase) and your revised manuscript.

Regards, Bruce
