

Interactive comment on “Streamflow simulation methods for ungauged and poorly gauged watersheds” by A. Loukas and L. Vasiliades

Anonymous Referee #2

Received and published: 17 April 2014

I have reviewed the paper “Streamflow simulation methods for ungauged and poorly gauged watersheds” by Loukas and Vasiliades, again (the second time). All of the suggested corrections from the first review have been considered by the Authors, and the shape of the manuscript is much better now. The only item I would suggest to be considered by Authors is writing the full name of the abbreviation ‘UBC’ watershed model, before using it first time (in abstract and in the main body of the paper). The models are good characterized and the study areas are well described. The paper fulfills any criteria to be published in the NHESS.
