I read carefully the review of Dr. Serinaldi and during my long experience both as author as reviewer I have never seen comments so hostile and biased. In my opinion and (following my ethics) the referee comments should support the authors in improving the results presented for the publication and insult (in any way) the authors For these reasons I totally refuse to reply to these comments! As closure I want to quote the reviewer "I really think that this referee report is an example of a useless approach to review a manuscript".
