The reviewer wrote: “I have reviewed the paper “Streamflow simulation methods for ungauged and poorly gauged watersheds” by Loukas and Vasiliades, again (the second time). All of the suggested corrections from the first review have been considered by the Authors, and the shape of the manuscript is much better now. The only item I would suggest to be considered by Authors is writing the full name of the abbreviation ‘UBC’ watershed model, before using it first time (in abstract and in the main body of the paper). The models are good characterized and the study areas are well described. The paper fulfils any criteria to be published in the NHESS.”

The authors thank the reviewer for his/her constructive and useful comments. All com-
