

Interactive comment on “Building and design defects observed in the residential sector and the types of damage observed in recent earthquakes in Turkey” by M. Tolga Çöğürçü

Anonymous Referee #3

Received and published: 6 March 2015

1. The English vocabulary of the paper needs some minor improvements from technical language points. For example, beam-column joint region is generally used instead of column-beam integration zones. 2. Disintegrate is more suitable instead of flake and confinement is suitable instead of winding. 3. Deformed bars are preferred instead of ribbed. Planiform can be changed as undeformed. 4. Lap length is suitable instead of ore length. 5. Development length is used instead of corbelled additional length. 6. The number of figures or photos and total length of the paper can be decreased. 7. The references must be rechecked.

RESULT; The paper involves several valuable information's for scientific development

C140

and can be accepted as a scientific paper and can be published.
