

## ***Interactive comment on “Storms or cold fronts? What is really responsible for the extreme waves regime in the Colombian Caribbean coast” by L. J. Otero et al.***

**Anonymous Referee #2**

Received and published: 24 September 2015

Under my consideration, this paper should be rejected. Although the title looks really interesting, once one starts reading the manuscript soon realize that it is not well organized and the English is very poor. As an example, the first sentence of thew introduction: "Waves, wich are also responsible...." is very long and bad sounding.

Nothing really new is shown and some of the finding are not well justified as determining a 50 year return period using only 15 years.

Figures have not be done rigourosly, Figure 1 is a Google Earth screenshot..., in Figure 3 axes should be square...

C1811

I suggest the authors rewriting the paper, avoiding repeating ideas and superflous messenges. One paper like this should be shorter and clearler.

Best regards
