

Interactive comment on “Large scale landslide susceptibility assessment using the statistical methods of logistic regression and BSA – study case: the sub-basin of the small Niraj (Transylvania Depression, Romania)” by S. Roşca et al.

Anonymous Referee #1

Received and published: 22 December 2015

I started to review the manuscript but the English is really too poor to be acceptable and understandable. The text can be evaluated only after a strong revision of the English. There are several problems I have seen in the first few pages. Several sentences are not clear, numbers in the text and in the tables are different. Figure 2 is not clear and not explained in the text. The text can be evaluated only after a strong revision of the English I would recommend rejection.
