Received and published: 18 January 2016

The authors sincerely thank referee #2 (Dr. Martin Mergili) for his peer-review and suggestions offered. Answers to each review comment are given below.

Comment #1: The text of Section 2.1 is not part of the Methodology. It could facilitate reading to have the study areas described directly before the presentation of the results obtained for these areas e.g., as a separate section between Sections 2 and 3. We agree to describe the study areas (i.e. Section 2.1) right before the presentation of the results.

Comment #2: Further, the authors might think about at least partly replacing the textual description of the seven study areas by a table summarizing the main features of the

## Interactive Comment

areas. This might enhance the readability. If my suggestion 1. is followed, such a table may also contain some key figures describing the results obtained for each study area. A table is included that summarizes the main features of the study areas. The table does not contain results obtained for each study area, since the table is cited in the beginning of the Results section.

Comment #3: In my opinion, the first part of the Results section (until page 6202, line 5) does actually not contain results. This part of the text should rather be included in the Methodology section. We agree to include the first part of the Results section (until page 6202, line 5) in the Methodology section.

On behalf of the authors, Kostas Kalabokidis Univ. of the Aegean, Greece
