

Interactive comment on “Tsunami hazard warning and risk prediction based on inaccurate earthquake source parameters” by K. Goda and K. Abilova

Anonymous Referee #2

Received and published: 11 February 2016

Dear Drs. Goda and Abilova,

thanks for taking my review comments into account. I found it particularly interesting to look at additional realizations for the slip distributions (Fig 2 in the review) and see how these concentrate along the trench.

Very interesting article.

Best regards, Jan Dettmer
