Received and published: 12 April 2015

Dear Dr. Tseng,

I have now examined the comments posted by two independent referees, and your responses to their comments. I have also read your contribution.

The referees concur in saying that the quality of the submitted work is not very high, and that there are a number of problems with the analysis performed, and the results obtained. I share these comments of the reviewers.

Despite these criticisms, I have decided that your manuscript can be considered for publication after major revisions are made.

C427

If you are willing to make the necessary revisions, I will be pleased to reconsider your submission, with the help of the same reviewers who examined the present work.

In submitting your revised version, please consider very carefully all the comments made by the referees, and provide a detailed list of the changes made to the text, and a detailed list of your responses to the reviewers' comments. Also, make an effort to improve the quality of the English language and of the figures.

Please note that this editorial decision does not guarantee that your paper will be accepted for final publication in NHESS. A decision will be made when the revised version will be available, and will be evaluated.

Kind regards,

Fausto Guzzetti NHESS Executive Editor
