Received and published: 23 April 2015

In a recent communication to Nature (5 F E B R U A R Y 2 0 1 5 | V O L 5 1 8 | N A T U R E | 3 5), Lejano et al. make the point that the communication of the hazard by the Philippine Atmospheric, Geophysical and Astronomical Services Administration (PAGASA) that was sent to local agencies and communities was not efficient and the recipients did not understand the risk.

Can you please comment about this?
