Interactive comment on "Brief Communication: On the rapid and efficient monitoring results dissemination in landslide emergency scenarios: the Mont de La Saxe case study" by D. Giordan et al.

Anonymous Referee #1

Received and published: 15 June 2015

By means of a real case study, the authors describe how to disseminate the monitoring results of a natural hazard in efficient way, adapting the communication language (way of representing the results) to different type of interlocutors. Although the paper is not providing nothing significantly new, it could be taken as a good example of how to face the monitoring of a natural hazard in terms of management of the results. It is well written, clear enough and in my oppinion is interesting enough. Hence, I think it can be published as it is.
