Interactive comment on "Data-driven Flood Analysis and Decision Support" *by* Meng-Han Tsai et al.

Anonymous Referee #2

Received and published: 23 September 2016

The manuscript deals with a computer-based system to improve the efficiency of flood management. The main purposes of the system seem to be:

1) to make the data processing faster; 2) to make the outputs user-friendly for decision makers.

I think that the manuscript does not fit well the aims of NHESS as no methodological innovation is presented. According to Reviewer 1, I suggest to the authors to submit the work to a journal having data management or computers and applications as focus.
