Interactive comment on "Brief communication: Extended chronology of the Cordón Caulle volcanic eruption beyond 2011 reveals toxic impacts" *by* Werner Thomas Flueck

Anonymous Referee #2

The work reports the chemical impact of a volcanic eruption, with particular emphasis on the influence of fluoride on biological systems. The paper is clear an integrates previous studies performed on the Cordon-Caulle eruption occurred in Chile in 2011. A suggest a very minor correction: please, report in the bibliography the paper by Easdale et al., 2014 cited at the beginning of paragraph 2.4.
