Dear Anonymous Referee, thank you very much for your comments. I really appreciate them; particularly, your idea to add the reference to a very good paper by Samaras et. all (2014). Not only does this publication include the simulations of a real Lebanon case but also brings about the progress in the beaching formalism in MEDSLIK-II. I have already added the reference to the next, corrected version of the manuscript. Best regards, on behalf of the co-authors, Svitlana Liubartseva
