

Interactive comment on “Decision support system for emergency management of oil spill accidents in the Mediterranean Sea” by S. Liubartseva et al.

Anonymous Referee #1

Received and published: 30 June 2016

The paper deals with web based DDS developed under the framework of the TESSA project, in support of the emergency management of the oil spills in the Mediterranean Sea. The paper is well organized and well written. A review of the Medslick II is presented and description of the WITOIL DSS presented with one application to an hypothetical spill in the Southern Adriatic.

I suggest to following reference to the MedslickII code in 2.1 and in the conclusions at line 16 page 9:

Samaras, Achilleas G.; De Dominicis, Michela; Archetti, Renata; Lamberti, Alberto; Pinardi, Nadia. Towards improving the representation of beaching in oil spill models: A case study. MARINE POLLUTION BULLETIN Volume: 88 Issue: 1-2 Pages: 91-101 DOI: 10.1016/j.marpolbul.2014.09.019. 2014.
