Detailed responses to SC2 the reviewer' comments (nhess-2016-94) of " Empirical Study on Drought Adaptation of Regional Rainfed Agriculture in China"

Thanks so much for your suggestions. There are our brief responses of your comments. 1. The section of 2.2 “Study area” should be put before “2.1 Conceptual Model”.

Response: We put “2.1 Conceptual Model” before “2.2 Study area” considering that the conceptual model is the theoretical basis of the concrete research.

2. Fig 3 “Location of Shidian County in China” should show more detail information such as “Latitude and longitude” and the “Identifier Description for the red five-pointed star”

[Discussion paper](#)

Response: Your suggestion is very valuable. We will repaint the map of “Location of Shidian County in China” and add more detail information.

3. Figure 7. Annual mean temperature changes during the rainy and dry seasons in the study area (1960-2011), is the precipitation rather than the temperature?

Response: We feel so sorry about the mistakes, it indeed the precipitation rather than the temperature. We will carefully check all the content to avoid the happening of this kind of mistake.
