

***Interactive comment on “A coupled wave-3D hydrodynamics model of the Taranto Sea (Italy): a multiple-nesting approach” by M. G. Gaeta et al.***

**Anonymous Referee #1**

Received and published: 14 April 2016

Very interesting work, including different model coupling and validation with field measurements.

I recommend its publication.

Comments: -In Fig. 9 a reference vector would help more than the color scale. -Also in the area of Mar Grande (i.e. Figure 9 area) a figure with significant wave height distribution could be added.
