Dear Authors,

both reviewers considered your work good and publishable, after revisions. In particular, they believe that the “technical” parts of the work should be reduced and/or summarized.

I agree with them. Thus, I have also some suggestions, listed below:

- Text in rows 61-83 could be largely reduced.
- Sections 3.1, 3.2, and 3.3 could be reduced.

C1

- Figures 4 and 5 could be deleted.
- Finally, I suggest reviewing the abstract by adding more precise information about the method described in the paper and the obtained results.

Sincerely,

Stefano Luigi Gariano
