Received and published: 3 August 2017

Referee #2: The English in which this paper is written is awkward in places, although comprehensible, and the authors should use shorter paragraphs. The title of the paper is misconceived. It is not a study of emergency management but a description of the deployment and use of a landslide monitoring and alarm system.

Authors: The manuscript was revised by a native English speaker, and the paragraphs were shortened.

Referee #2: The title of the paper is misconceived. It is not a study of emergency

management but a description of the deployment and use of a landslide monitoring and alarm system.

Authors: The title was changed as suggested into: "GB-InSAR monitoring of slope deformations in a mountainous area affected by debris flow events"

Referee #2: Line 9: Deep Seated Gravitational Slope Deformation - as it is not a common noun and adjectives, this term should not be capitalized. The same issue occurs with other terminology. Line 33: have been increasingly being recognized - adjust, please Line 79: Jurassic Line 90: please do not use contractions in formal prose. Figure 3 includes wording that will not reproduce at the page scale. it should be redrafted.

Authors: all of the further referee minor corrections were accepted, and the legend of figure 3 was improved.
