

Interactive comment on “Emergency management of the 2010 Mt. Rotolon landslide by means of a local scale GB-InSAR monitoring system” by William Frodella et al.

Anonymous Referee #2

Received and published: 28 July 2017

The English in which this paper is written is awkward in places, although comprehensible, and the authors should use shorter paragraphs.

The title of the paper is misconceived. It is not a study of emergency management but a description of the deployment and use of a landslide monitoring and alarm system.

Line 9: Deep Seated Gravitational Slope Deformation - as it is not a common noun and adjectives, this term should not be capitalised. The same issue occurs with other terminology.

Line 33: have been increasingly being recognized - adjust, please

Line 79: Jurassic

Line 90: please do not use contractions in formal prose.

Figure 3 includes wording that will not reproduce at the page scale. it should be re-drafted.

Overall, I think the paper is publishable with a few tweaks to the English and a revised title. It offers a good description of an innovative and valuable landslide monitoring system.
